

# Cybersecurity forum Baku 2026

# A single, programmable network unlike any other

**335+** cities

in 125+ countries, including mainland China

**w/190+** cities

for AI inference powered by GPUs

**~50 ms**

from ~95% of the world's  
Internet-connected population

**~13,000 networks**

directly connect to Cloudflare, including ISPs, cloud  
providers, and large enterprises

**449 Tbps**

of network capacity and growing

# Points of Presence in Azerbaijan

---

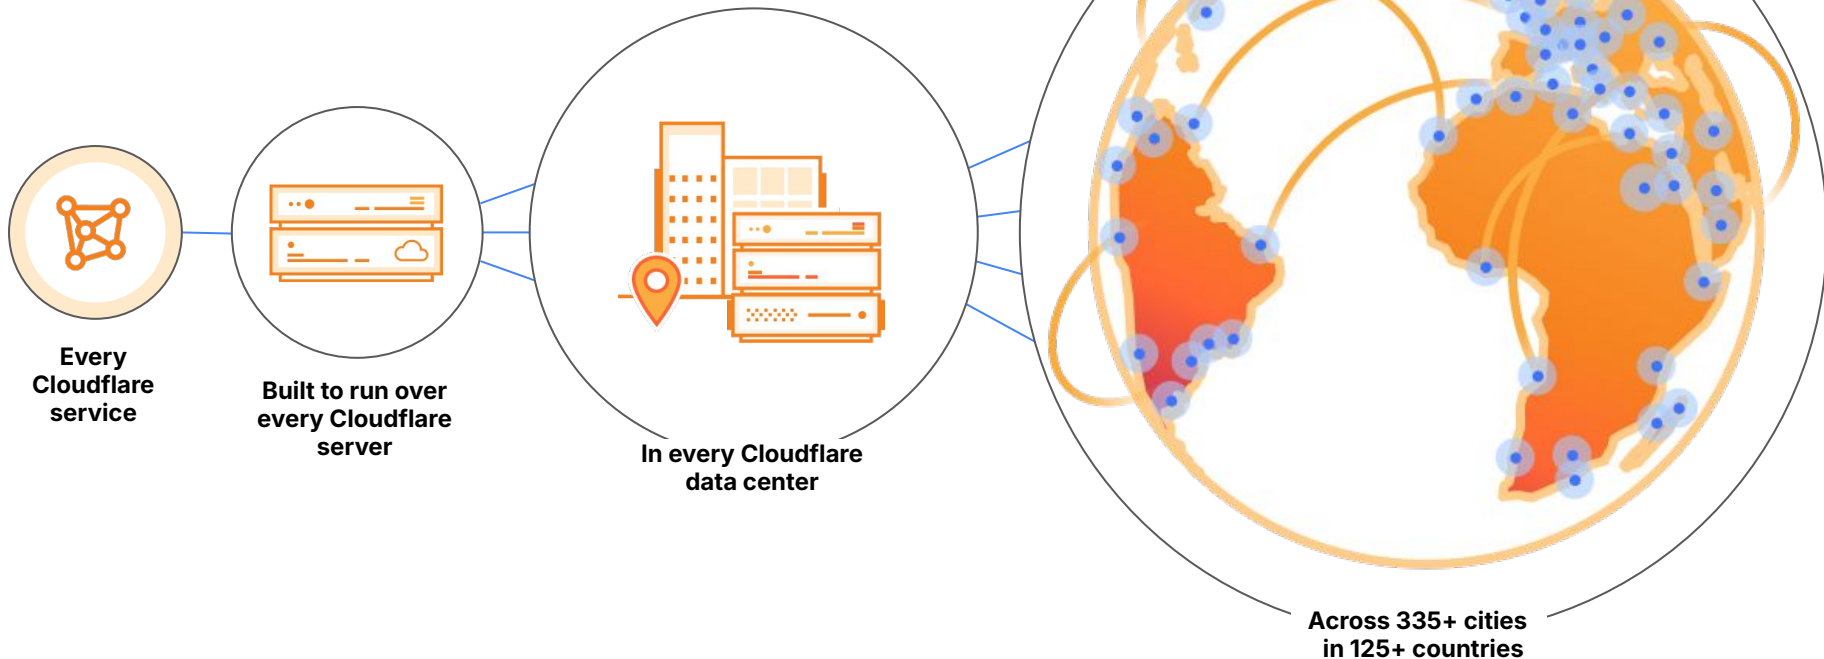

## Baku x 3

## Astara

# A single, composable platform of Internet-native services

## Cloudflare's connectivity cloud

Connect. Protect. Build

### SASE & Workspace Security

- ZTNA (with MCP Server Portals)
- SWG (with AI Usage Controls)
- CASB (with AI Posture Management)
- Email Security
- Data Loss Prevention
- Remote Browser Isolation
- Digital Experience Monitoring

### App Security & Perf Services

- WAF with Rate Limiting
- Firewall for AI
- API Protection
- Load Balancing
- Bot Management (with AI Crawl Control)
- L7 DDoS Protection
- CDN and DNS
- Origin Shield

### Developer Services

- Serverless compute
- AI inference
- Full stack applications
- Object & key-value storage
- SQL database
- Media optimization and delivery
- Agentic SDK and Workflows
- AI Gateway

### Network Services

Network-as-a-Service Firewall-as-a-Service L3 & L4 DDoS Protection Network Interconnect Smart Routing IDS/IPS

## Cloudflare Programmable Global Network

Artificial Intelligence/Machine Learning

Threat, Network Intelligence

# Cloudflare addresses key digital imperatives

## Digital imperatives

**1 Modernizing apps across hybrid/multi cloud**

**2 Managing cyber risk**

**3 Adopting AI and machine learning**

**4 Building digital resiliency and speed**

**5 Simplifying global data compliance**

**6 Consolidating IT and security stacks**

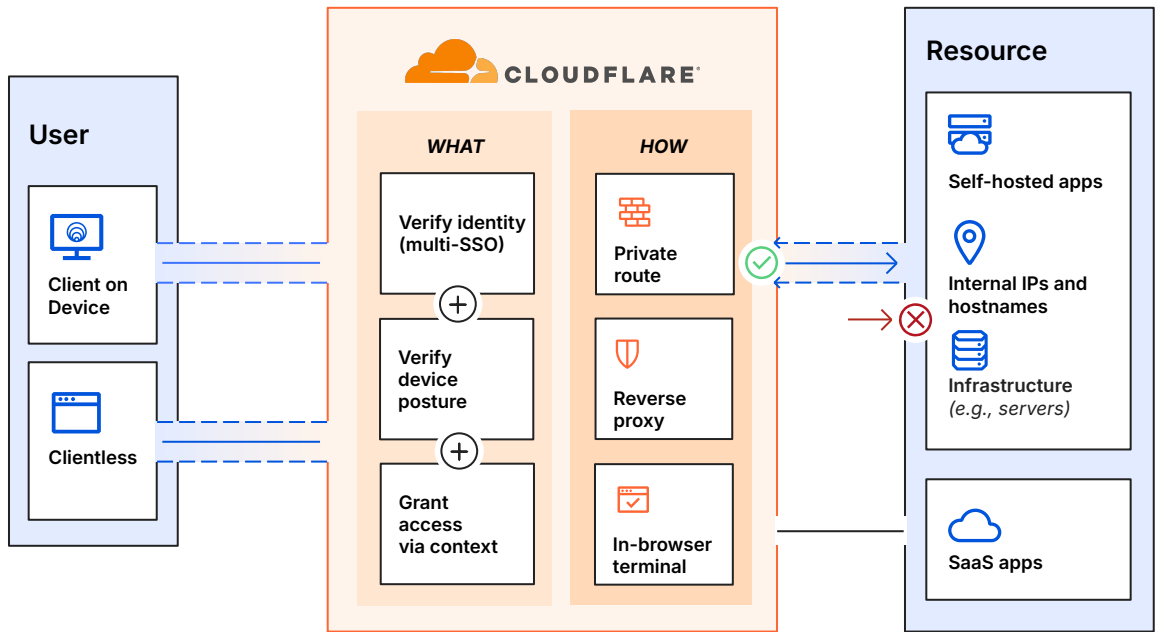

## Connectivity cloud services include:

- ✓ **App + API services:** Protect and accelerate web applications  
**Network services:** Connect and secure hybrid cloud usage
- ✓ **SSE:** Enforce Zero Trust policies for every user and device  
**App + API security:** Block zero-days and other threats
- ✓ **Developer services:** Run inference at the edge, manage AI usage  
**SSE:** Control how employees use AI productivity apps
- ✓ **App + API security:** Mitigate the largest attacks with ease  
**App performance:** Ensure strong performance globally
- ✓ **Data Localization Suite:** Limiting traffic and data locality to specific countries and regions — across apps and users
- ✓ **SSE, SASE, App + API security / performance, and developer + AI services** — all on a single platform

Cloudflare global network

# Cloudflare One SASE / Zero Trust

# Simple, secure access

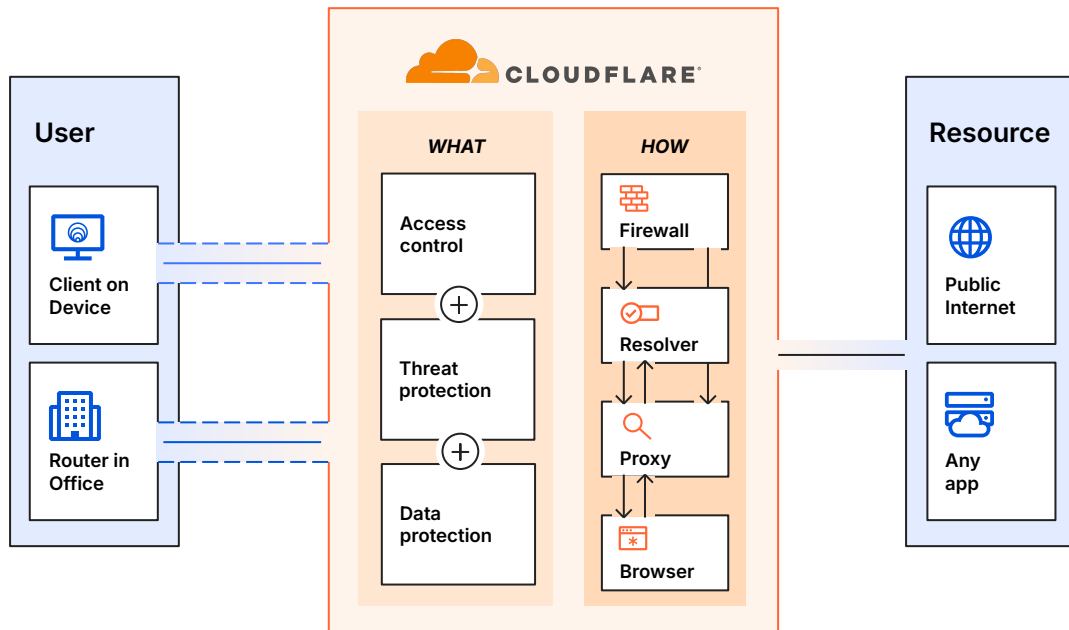

## Zero Trust Network Access

Simplify remote access; augment or replace VPNs

Improve user experience for all (contractors, developers)

Reduce IT / help desk tickets & eliminate lateral movement

# Cyber threat defense

## Secure Web Gateway

Simplify policy compliance

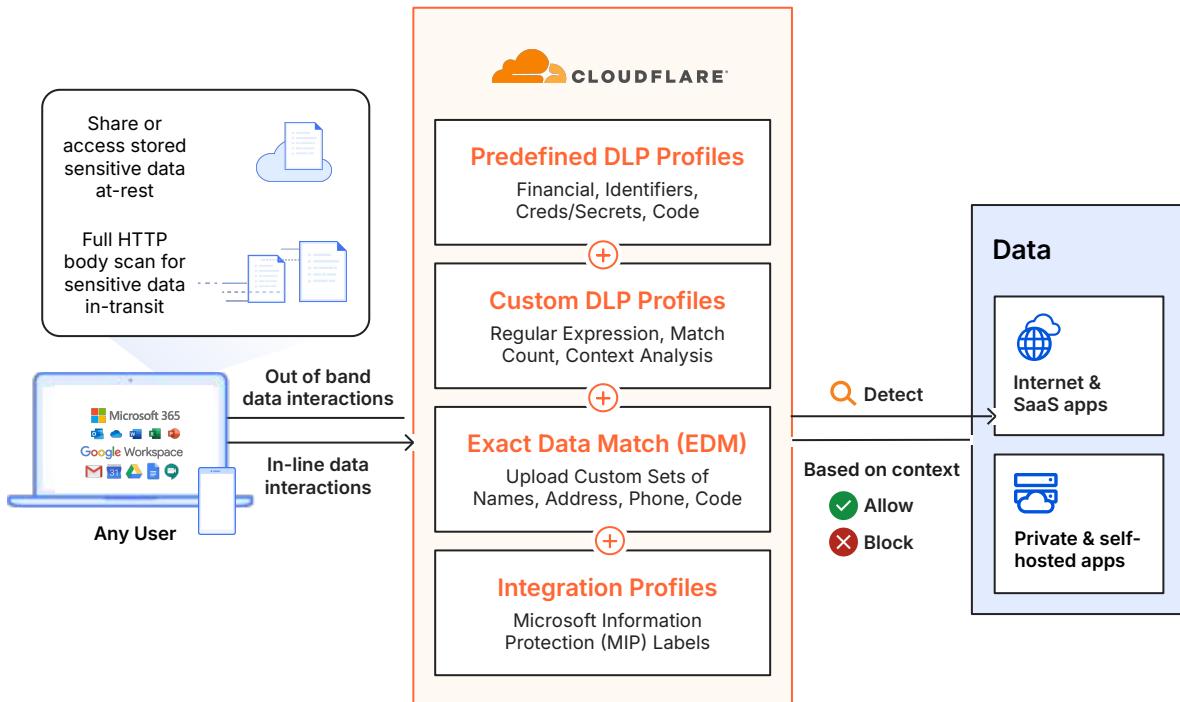

Stop phishing

Stop ransomware

Surface Shadow IT

Stop unknown threats

# Data protection

## Integrated Data Loss Prevention

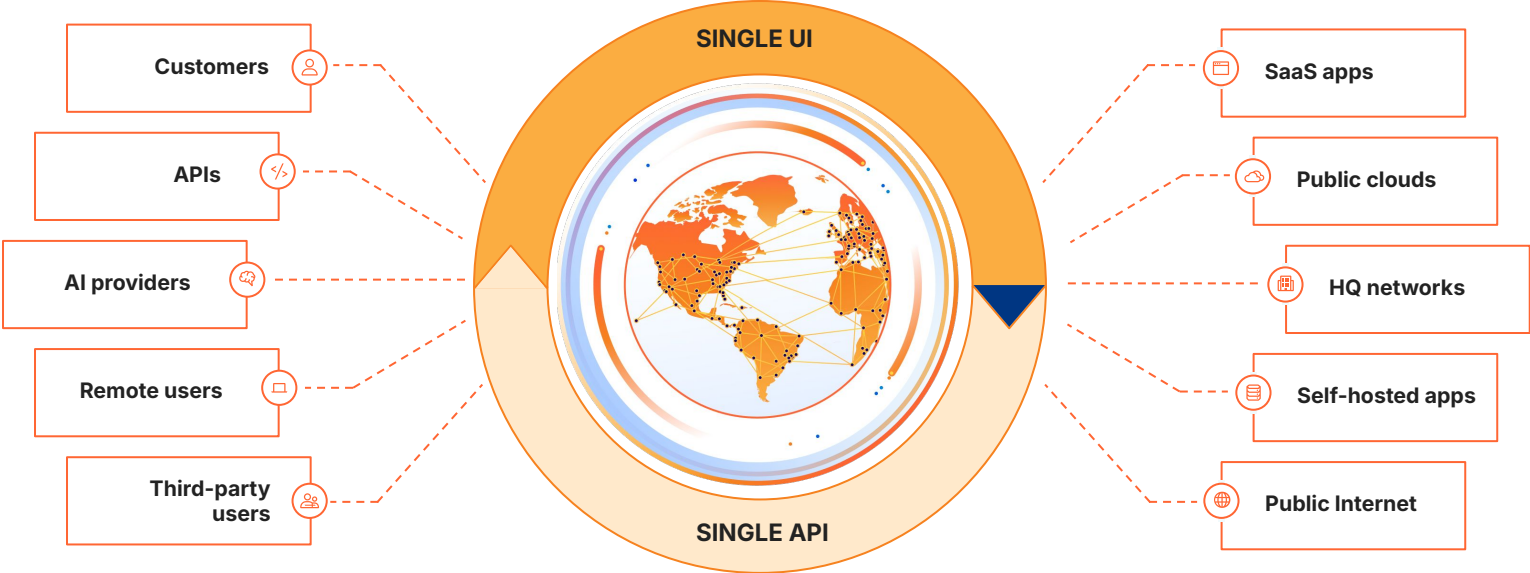

Simplify regulatory compliance

Reduce risk of data leakage and breaches

Increase in-line visibility across data, users, and apps

# Simplified management interface

Log service integrations

Automation via Terraform
